List of modules that are currently installed and enabled modules:

CORE

- Automated Cron: Provides an automated way to run cron jobs.

- Ban: Allows banning visits from specific IP addresses.

- Block: Allows users to configure blocks and place them in regions.

- Block Content: Allows the creation of content blocks and block types.

- Breakpoint: Manages breakpoints and breakpoint groups for responsive designs.

- CKEditor 5: Provides the CKEditor 5 rich text editor.

- Configuration Manager: Allows importing and exporting configuration changes.

- Custom Menu Links: Allows users to create menu links.

- Database Logging: Logs system events in the database.

- Field: Provides the capabilities to add fields to entities.

- Field UI: Provides a user interface for the Field module.

- Filter: Filters text content in preparation for display.

- Internal Dynamic Page Cache: Caches pages with dynamic content for all users.

- Internal Page Cache: Caches pages for anonymous users.

- Media: Manages the creation, configuration, and display of media items.

- Media Library: Enhances the media list to find and use media items easily.

- Menu UI: Provides a user interface for managing menus.

- MySQL: Provides the MySQL database driver.

- Node: Manages the creation and display of main site content.

- Password Compatibility: Provides password checking for older user accounts.

- Path: Allows users to create custom URLs.

- Responsive Image: Provides functionality for HTML5 picture tags.

- System: Provides user interfaces for core systems.

- Taxonomy: Enables the categorization of content.

- Text Editor: Framework to associate text editors with text formats.

- Toolbar: Provides an administration toolbar.

- Update Manager: Checks for and manages updates.

- User: Manages user registration, login, roles, and permissions.

- Views: Framework to fetch and display database information.

- Views UI: User interface for creating and managing views.

ACCESS

- Protected Pages: Allows protecting pages and private files by password.

ACQUIA

- Acquia Connector: Allows secure communication with Acquia.

- Acquia Search: Integration with Acquia's hosted search service.

ADMINISTRATION

- Admin Toolbar: Improved drop-down menu interface for the toolbar.

- Admin Toolbar Extra Tools: Adds links like "Flush cache" and "Run cron" under the Drupal icon.

- Upgrade Status: Reviews major upgrade readiness for the site.

ANTI-VIRUS

- ClamAV Anti-Virus: Integration with the ClamAV scanner.

CENTRETEK

- Centretek Common: Common interfaces and controllers for other Centretek modules.

CHAOS TOOL SUITE

- Chaos Tools: Utility and helper APIs for developers.

CHAOS TOOL SUITE (EXPERIMENTAL)

- Chaos Tools Views: Improvements to core Views code for block control.

CKEDITOR 5 PLUGIN PACK

- CKEditor 5 Font Plugins: Provides Font Family, Size, and Color plugins.

- CKEditor 5 Plugin Pack: Provides common functions for other modules in the pack.

CONFIG

- Config Ignore: Ignores certain configurations during imports/exports.

- Configuration Split: Filter for importing and exporting split config.

CONFIGURATION

- Configuration Filter: Allows modules to interact with ConfigStorage via plugins.

CONTEXT

- Context: Set conditions and configure reactions.

- Context UI: Simple UI for setting up site structure using Context.

CUSTOM

- CKEditor5 Media Resize: Allows resizing of embedded image media.

- masstech_article: Customizations for Article Content type.

DEVELOPMENT

- Devel: Various blocks and pages for developers.

DOMAIN

- Domain: Creates domain records within the installation.

- Domain Access: Domain-based access control for content.

- Domain Alias: Maps multiple host requests to a single domain record.

- Domain Configuration: Allows domain-specific configuration.

- Domain Configuration UI: UI for saving domain-specific configuration.

ENCRYPTION

- Encrypt: Provides an API for two-way encryption.

FIELD

- Block Field: Allows content entities to create and configure custom block instances.

FIELDS

- Field Group: Ability to group fields on both forms and displays.

FIELD TYPES

- Address: Functionality for handling postal addresses.

- Datetime: Defines field types for dates and times.

- Datetime Range: Ability to store end dates.

- Entity Reference Revisions: Entity Reference field type with revision support.

- File: Field type for files.

- Image: Field type for image media.

- Link: Field type for internal and external URLs.

- Options: Field types for select lists, checkboxes, and radio buttons.

- Telephone: Field type for telephone numbers.

- Text: Field types for short and long text.

- Time Range: Form widget to fill in time ranges.

GEOCODING

- Geocoder: API to geocode and reverse geocode data.

- Geocoder Address: Integration with the Address module.

- Geocoder Field: Geocodes field content into other fields.

- Geocoder Geofield: Integration with the Geofield module.

GEOFIELD

- Geofield: Stores geographic and location data.

IK

- Constant Contact Module: Integrates Constant Contact API v3.

JQUERY UI

- jQuery UI: Provides jQuery UI library.

- jQuery UI Datepicker: Provides jQuery UI Datepicker library.

- jQuery UI Slider: Provides jQuery UI Slider library.

- jQuery UI Touch Punch: Provides jQuery UI Touch Punch library.

MAIL

- Drupal Symfony Mailer: Integrates Symfony Mailer.

- Mail System: UI for per-module and site-wide mail selection.

- Mailer Transport: Support for upgrade to v2.x.

MASSTECH

- MassTech Common: Common functionality for the MassTech site.

- MassTech Event Expiry: Automatically unpublishes expired events.

MEDIA

- Crop API: Storage and API for image crops.

- Focal Point: Specifies focal points for image cropping.

- Imce File Manager: File manager supporting personal folders.

- Simple Popup Blocks: Shows block contents or forms in popups.

- SVG image: Supports SVG files in image formatters and widgets.

MULTILINGUAL

- Language: Allows users to configure available languages.

OTHER

- Components: Registers component folders as Twig namespaces.

- Editor Advanced Link: Adds title and target attributes to link dialogs.

- Entity Usage: Tracks usage of entities referenced by other entities.

- Link attributes: Widget to allow setting link attributes.

- Link attributes: Menu Link Content integration: Integration for menu links.

- Pathauto: Automatically generates URL aliases.

- Rabbit Hole: Basic functionality shared among Rabbit Hole modules.

- Rabbit Hole nodes: Rabbit Hole functionality specifically for nodes.

- Redirect: Allows redirects from old URLs to new URLs.

- Scheduler: Automatically publishes/unpublishes content on set dates.

- Token: UI for Token API and core tokens.

- Twig Field Value: Twig filters for values and labels.

- Twig Tweak: Extra Twig functions and filters.

- Views field formatter: Uses view results to display a field.

- X-frame-options Configuration: Adds x-frame-options headers.

PARAGRAPHS

- Paragraphs: Enables creation of paragraph entities.

- Paragraphs Library: Library for reusing paragraphs.

PERMISSIONS BY TERM

- Permissions by Term: Restricts access via user-to-term relations.

PURGE

- Purge: External cache invalidation API.

- Purge Tokens: Token support for cache invalidation.

- Purge UI: Admin interface for Purge.

PURGE - PROCESSORS

- Late runtime processor: Processes the queue on every request.

- Purge Cron Processor: Processes the queue during cron runs.

PURGE - QUEUERS

- Core tags queuer: Queues tags that Drupal invalidates internally.

PURGE - REVERSE PROXIES & CDNS

- Acquia Purge: Cache invalidation for Acquia Cloud.

- Generic HTTP Purger: Highly configurable HTTP request purger.

- Generic HTTP Tags Header: Exports response headers for tag-based invalidation.

SEARCH

- Search API: Framework for search capabilities.

- Search API Solr: Search API implementation using Apache Solr.

- Search API Solr Admin: Solr administration tasks.

SECURITY

- Key: Ability to manage site-wide keys.

- Real AES: Authenticated AES encryption method.

- Two-factor Authentication (TFA): Pluggable provider for second-factor authentication.

SEO

- Metatag: Manage meta tags for all entities.

- Metatag: Facebook: Advanced meta tags for Facebook.

- Metatag: Open Graph: Support for Open Graph Protocol meta tags.

- Simple XML Sitemap: Generates XML sitemaps for SEO.

SPAM CONTROL

- CAPTCHA: API for adding challenges to forms.

- Honeypot: Mitigates spam using the honeypot method.

- Image CAPTCHA: Provides image-based CAPTCHA.

- reCAPTCHA: Protects site from spam using reCAPTCHA.

STATISTICS

- Google Tag Manager: Manage website analytics via GTM.

USER INTERFACE

- Linkit: Interface for internal and external linking in WYSIWYG.

VIEWS

- Better Exposed Filters: Advanced options for exposed Views elements.

- Selective Better Exposed Filters: Shows only used terms in filters.

- Views Block Exposed Filter Block: Provides blocks for filters on View blocks.

- Views Data Export: Plugin to export views data to various formats.

WEBFORM

- Webform: Enables creation of forms and questionnaires.

- Webform UI: User interface for building webforms.

WEB SERVICES

- RESTful Web Services: Framework for exposing REST resources.

- Serialization: Service for converting data to/from JSON/XML.

- Serialization (CSV): Provides CSV as a serialization format.
